

## **Lumina 3710 Series: Ultra Metallic Cast Vinyl Film Application with Lumina Craft Tapes**

For proper use of this product, please see the following pertaining to the use of Lumina® 3710 Series with Lumina® Craft and Hobby Application Tapes (Lumina 2668 and 2670 Series).

FDC Graphic Films, Inc. recommends applying Craft and Hobby Application Tapes immediately before application to cut and weeded graphics made from the 3710 Series. Due to the air egress liner, there is a possibility that the craft tapes may begin to lift and cause damage to the graphic if not immediately removed.

If storing the graphic after being masked with a Lumina® Craft and Hobby Application tape, users may store the graphic on the liner of the application tape rather than the film's liner. To do this:

1. Cut and weed the graphic normally.
2. Apply application tape to the graphic by removing the liner and placing the tape, adhesive side down, onto the graphic.
3. Start in the center of the graphic and use overlapping strokes to squeegee the graphic onto the application tape.
4. Peel the tape away from the liner at a 45° angle.
5. With the graphic lifted from the film's liner, place the tape and graphic back on to the tape's liner for storage.
